

CPTAC-PDA

Summary

This collection contains subjects from the National Cancer Institute's [Clinical Proteomic Tumor Analysis Consortium](#) Pancreatic Ductal Adenocarcinoma (CPTAC-PDA) cohort. CPTAC is a national effort to accelerate the understanding of the molecular basis of cancer through the application of large-scale proteome and genome analysis, or proteogenomics. Radiology and pathology images from CPTAC Phase 3 patients are being collected and made publicly available by The Cancer Imaging Archive to enable researchers to investigate cancer phenotypes which may correlate to corresponding proteomic, genomic and clinical data.

CPTAC Phase 3 collects data from ten cancer types. In TCIA, imaging from each cancer type will be contained in its own TCIA Collection, with the collection name "CPTAC-*cancertype*". CPTAC Phase 3 Imaging data is made available on TCIA each quarter as it is collected. A summary of CPTAC Phase 3 imaging efforts can be found on the [CPTAC Imaging Proteomics](#) page.

Radiology imaging is collected from standard of care imaging performed on patients immediately before the pathological diagnosis, and from follow-up scans where available. For this reason the radiology image data sets are heterogeneous in terms of scanner modalities, manufacturers and acquisition protocols. Pathology imaging is collected as part of the CPTAC qualification workflow.

Acknowledgements

We would like to acknowledge the individuals and institutions that have provided data for this collection:

- Beaumont Health System, Royal Oak, MI - Special thanks to **George D. Wilson, PhD** from the Department of Radiation Oncology Research, **Barbara Pruetz** of the Biobank, **Debra Kapczynski, MHSA, CIIP, RT(R)(CT)** and **Rachel Deyer** from the Department of Diagnostic Radiology.
- International Institute for Molecular Oncology, Poznań, Poland - Special thanks to **Maciej Wiznerowicz MD, PhD** and **Jan Lubiski MD PhD, Marek Durlik MD, PhD**, and **Magdalena Derejska MD, PhD**. from Central Clinical Hospital of the Ministry of Interior in Warsaw; and **Katarzyna Kunierz MD, PhD**, **Sergiusz Nawrocki MD, PhD** and **Pawel Lampe MD, PhD** from University Clinical Center in Katowice, Poland
- St. Joseph's Hospital and Medical Center, Phoenix, AZ - Special thanks to **Jennifer Eschbacher, MD** from the Department of Neuropathology, **Catherine Seiler, PhD**, **Rosy Singh** and **Beth Hermes** from the Biobank Core Facility, and **Victor Sisneros, RT(R)(CT), CPSA**.
- University of Calgary, Alberta, Canada - Special thanks to **Oliver Bathe, MD, FRCS(C)** from the Departments of Surgery/Oncology, **Marina Salluzzi, PhD** and **Nicole Blenkin** from the Department of Radiology, Calgary Image Processing and Analysis Centre (CIPAC), and **Jennifer Koziak** from the Department of Surgery.

Data Access Detailed Description Citations & Data Usage Policy Versions

Data Access

Choosing the Download option will provide you with a file to launch the TCIA Download Manager to download the entire collection. If you want to browse or filter the data to select only specific scans/studies please use the [Search By Collection](#) option.

Data Type	Download all or Query/Filter
Images (DICOM, 22.5 GB)	 
Tissue Slide Images (web)	
Clinical Data (CSV)	Coming soon
Proteomics (web)	

Click the Versions tab for more info about data releases.

Detailed Description

Image Statistics	
Modalities	CR, CT, DX, MR
Number of Patients	44
Number of Studies	58
Number of Series	380
Number of Images	45,785
Images Size (GB)	21.8

A Note about TCIA and CPTAC Subject Identifiers and Dates

Subject Identifiers:

A subject with radiology and pathology images stored in TCIA is identified

with a de-identified project Patient ID that is identical to the Patient ID of the same subject with clinical, proteomic, and/or genomic data stored in other CPTAC databases and web sites.

Dates:

The radiology imaging data is in DICOM format. To provide temporal context information aligned with events in the clinical data set for each patient, TCIA has inserted information in DICOM tag (0012,0050) *Clinical Trial Time Point ID*. This DICOM tag contains the number of days from the *date the patient was initially diagnosed pathologically with the disease* to the date of the scan. E.g. a scan acquired 3 days before the diagnosis would contain the value -3. A follow up scan acquired 90 days after diagnosis would contain the value 90.

The DICOM date tags (i.e. birth dates, imaging study dates, etc.) are modified per TCIA's standard process which offsets them by a random number of days. The offset is a number of days between 3 and 10 years prior to the real date that is consistent for each TCIA image-submitting site and collection, but that varies among sites and among collections from the same site. Thus, the number of days between a subject's longitudinal imaging studies are accurately preserved when more than one study has been archived while still meeting HIPAA requirements.

Citations & Data Usage Policy

CPTAC imaging data is considered CPTAC metadata and as such it is freely available to the public according to the [TCIA Data Usage Policy](#). Note that CPTAC proteomic and genomic data use must comply with the [CPTAC Data Use Agreement](#).

These collections are freely available to browse, download, and use for commercial, scientific and educational purposes as outlined in the [Creative Commons Attribution 3.0 Unported License](#). Questions may be directed to help@cancerimagingarchive.net. Please be sure to acknowledge both this data set and TCIA in publications by including the following citations in your work:

Other Publications Using This Data

TCIA maintains [a list of publications](#) which leverage TCIA data. If you have a manuscript you'd like to add please [contact the TCIA Helpdesk](#).

Version 3 (Current): Updated 2018/06/30

Data Type	Download all or Query/Filter
Images (DICOM, 21.8 GB)	 
Tissue Slide Images (web)	
Clinical Data (CSV)	Coming soon
Proteomics (web)	

Added new subjects.

Version 2: Updated 2018/04/26

Data Type	Download all or Query/Filter
Images (DICOM, 21.4 GB)	 
Tissue Slide Images (web)	
Clinical Data (CSV)	Coming soon
Proteomics (web)	

Added new subjects.

Version 1: Updated 2018/01/10

Data Type	Download all or Query/Filter
Images (DICOM, 4.38 GB)	
Tissue Slide Images (web)	
Clinical Data (CSV)	(Coming Soon)
Proteomics (web)
