

# CPTAC-HNSCC

# Summary

This collection contains subjects from the National Cancer Institute's [Clinical Proteomic Tumor Analysis Consortium](#) Head-and-Neck cancer (CPTAC-HNSCC) cohort. CPTAC is a national effort to accelerate the understanding of the molecular basis of cancer through the application of large-scale proteome and genome analysis, or proteogenomics. Radiology and pathology images from CPTAC patients are being collected and made publicly available by The Cancer Imaging Archive to enable researchers to investigate cancer phenotypes which may correlate to corresponding proteomic, genomic and clinical data.

Imaging from each cancer type will be contained in its own TCIA Collection, with the collection name "CPTAC-*cancertype*", and is being made available on a release schedule that is coordinated with the CPTAC program releases of proteomic and genomic data. A summary of CPTAC imaging efforts can be found on the [CPTAC Imaging Proteomics](#) page.

Radiology imaging is collected from standard of care imaging performed on patients immediately before the pathological diagnosis, and from follow-up scans where available. For this reason the radiology image data sets are heterogeneous in terms of scanner modalities, manufacturers and acquisition protocols. Pathology imaging is collected as part of the CPTAC qualification workflow.

## CPTAC Imaging Special Interest Group

You can join the [CPTAC Imaging Special Interest Group](#) to be notified of webinars & data releases, collaborate on common data wrangling tasks and seek out partners to explore research hypotheses! Artifacts from previous webinars such as slide decks and video recordings can be found on the [CPTAC SIG Webinars](#) page.

## Acknowledgements

We would like to acknowledge the individuals and institutions that have provided data for this collection:

- International Institute for Molecular Oncology, Pozna, Poland - Special thanks to **Maciej Wiznerowicz MD, PhD** and **Jan Lubiski MD PhD**; **Heliodor wicki Clinical Hospital**, Pozna, Poland; **Witold Szyfter MD, PhD**, **Malgorzata Wierzbicka MD, PhD.**, **Ewelina Kalinowicz MD** and **Joanna Napieraa**
- BioPartners, CA - Special thanks to **Alexander Gasparian, PhD.** from the Department of Drug Discovery and Biomedical Sciences, University of South Carolina College of Pharmacy, **Kakhaber Zaalishvili, MD** Medical Advisor and Staff Pathologist at BioPartners, LLC, **Milla Gorodnia**, P resident of BioPartners, Inc., **Victoria Christensen**, Global Business Development/Project Coordination Manager, **Oksana Havryliuk, MD.** Chief of Research department of radiodiagnostics of NCI (Ukraine), **Marianna Gredil'**, Director of BioPartners, LLC, and **Anna Legenka** Chief of the Data Department at BioPartners, LLC

- Beaumont Health System, Royal Oak, MI - Special thanks to **George D. Wilson, PhD** from the Department of Radiation Oncology Research, **Barbara Pruetz** of the Biobank, **Debra Kapczynski, MHSA, CIIP, RT(R) (CT)** and **Rachel Deyer** from the Department of Diagnostic Radiology.
- Boston Medical Center, Boston, MA - Special thanks to **Chris D. Andry M.Phil, PhD** from the Department of Pathology and Laboratory Medicine, **Margaret Lavoye, Artem Kaliev, Wilson Chavez, Stephan Anderson, Jorge Soto,** and **Mitchell Horn** from the Department of Radiology, **Elizabeth Duffy, MA** and **Cheryl Spencer, MA** of the Biobank.
- University of Calgary, Alberta, Canada - Special thanks to **Oliver Bathe, MD, FRCS(C)** from the Departments of Surgery/Oncology, **Marina Salluzzi, PhD** and **Nicole Blenkin** from the Department of Radiology, Calgary Image Processing and Analysis Centre (CIPAC), and **Jennifer Koziak** from the Department of Surgery.

### Detailed Description

## Detailed Description

	Radiology Image Statistics	Pathology Image Statistics
Modalities	CT, SC, MR	Pathology
Number of Participants	64	112
Number of Studies	71	N/A
Number of Series	529	N/A
Number of Images	95,839	390
Images Size (GB)	51	97

## A Note about TCIA and CPTAC Subject Identifiers and Dates

### Subject Identifiers:

A subject with radiology and pathology images stored in TCIA is identified with a de-identified project Patient ID that is identical to the Patient ID of the same subject with clinical, proteomic, and/or genomic data stored in other CPTAC databases and web sites.

### Dates:

The radiology imaging data is in DICOM format. To provide temporal context information aligned with events in the clinical data set for each patient, TCIA has inserted information in DICOM tag (0012,0050) *Clinical Trial Time Point ID*. This DICOM tag contains the number of days from the *date the patient was initially diagnosed pathologically with the disease* to the date of the scan. E.g. a scan acquired 3 days before the diagnosis would contain the value -3. A follow up scan acquired 90 days after diagnosis would contain the value 90.

The DICOM date tags (be they birth dates, imaging study dates, etc.) are modified per TCIA's standard process which offsets them by a random number of days. The offset is a number of days between 3 and 10 years prior to the real date that is consistent for each TCIA image-submitting site and collection, but that varies among sites and among collections from the same site. Thus, the number of days between a subject's longitudinal imaging studies are accurately preserved when more than one study has been archived while still meeting HIPAA requirements.
