

DICOM-SEG Conversions for TCGA-LGG and TCGA-GBM Segmentation Datasets (DICOM-Glioma-SEG)

Description

This dataset contains DICOM-SEG (DSO) conversions of the [Segmentation Labels and Radiomic Features for the Pre-operative Scans of the TCGA-LGG collection](#) and [Segmentation Labels and Radiomic Features for the Pre-operative Scans of the TCGA-GBM collection](#) analysis datasets.

The MR volumes and segmentations provided in the original segmentation datasets (T1 pre-contrast, T1 post-contrast, T2, FLAIR) are in NIFTI format, co-registered to an atlas space, and re-sampled to 1mm isotropic resolution. This dataset contains DICOM-SEG versions of the same segmentations, transformed back into the original patient resolutions and orientations found in the TCIA's [TCGA-GBM](#) and [TCGA-LGG](#) datasets. This allows users to extract features from MR sequences without introducing interpolation artifacts from isotropic resampling.

The process for creating these DSO objects is as follows. Patient data from the original NIFTI datasets were registered and resampled from isotropic space to patient space and resolution using [3DSlicer's BRAINSFit module](#). The affine transformation files from these registrations are used to register and resample both the semi-automatic and automatic NIFTI segmentations into the spaces of each original MR DICOM dataset. These transformed NIFTI segmentations are then converted into DICOM-SEG datasets using the software package [dcmqi](#). Because each MR sequence has a unique patient space and resolution, the resulting dataset contains four DSO segmentations for each original NIFTI segmentation.

Included in this dataset are the converted DSO volumes, DSO metadata values used in the DSO conversion program [dcmqi](#), and affine transformation files from isotropic space to the original patient space saved in ITK format. Original patient DICOM volumes are also available for download below. A key is provided that maps individual DSO objects to their corresponding DICOM Series UID, to facilitate easier data analysis.

Data Access

Data Access

Click the **Download** button to save a ".tcia" manifest file to your computer, which you must open with the [NBIA Data Retriever](#).

Data Type	Download all or Query/Filter
TCGA-LGG images - 65 subjects (DICOM, 17 GB)	Download Search
TCGA-GBM images - 102 subjects (DICOM, 32 GB)	Download Search
Segmentations - (DICOM, 4 GB)	Download Search
DCMQI Metadata (ZIP, 3.1 MB)	Download
TCGA key mapping (CSV)	Download

Please contact help@cancerimagingarchive.net with any questions regarding usage.

Collections Used in this Third Party Analysis

Below is a list of the Collections used in these analyses:

- analysis result [Segmentation Labels and Radiomic Features for the Pre-operative Scans of the TCGA-GBM collection](#) derived from [TCGA-GBM](#)
- analysis result [Segmentation Labels and Radiomic Features for the Pre-operative Scans of the TCGA-LGG collection](#) derived from [TCGA-LGG](#)

Detailed Description

Detailed Description

Collection	Statistics
Number of Studies	168*
Number of Series	1304
Number of Patients	167
Number of Images	1304
Modalities	Seg

Image Size (GB)	4
-----------------	---

*For TCGA-GBM patient TCGA-06-0192, there were 2 studies.
