

LGG-1p19qDeletion

Summary

Redirection Notice

This page will redirect to <https://www.cancerimagingarchive.net/collection/lgg-1p19qdeletion/> in about 5 seconds.

These MRIs are pre-operative examinations performed in 159 subjects with Low Grade Gliomas (WHO grade II & III). Segmentation of tumors in three axial slices that include the one with the largest tumor diameter and ones below and above are provided in NiFTI format. Tumor grade and histologic type are also available. All of these subjects have biopsy proven 1p/19q results, performed using FISH. For the 1p/19q status "n/n" means neither 1p nor 19q were deleted. "d/d" means 1p and 19q are co-deleted.

Acknowledgements

Harmonization of the components of this dataset, including into standard DICOM representation, was supported in part by the NCI Imaging Data Commons consortium. NCI Imaging Data Commons consortium is supported by the contract number 19X037Q from Leidos Biomedical Research under Task Order HHSN26100071 from NCI.

Data Access

Data Access

Some data in this collection contains images that could potentially be used to reconstruct a human face. To safeguard the privacy of participants, users must sign and submit a [TCIA Restricted License Agreement](#) to help@cancerimagingarchive.net before accessing the data.

Data Type	Download all or Query/Filter	License
Images and Segmentations (DICOM, 2.7 GB)	Download Search (Download requires NBIA Data Retriever)	TCIA Restricted
Segmentations only (DICOM, 10 kB)	Download (Download requires NBIA Data Retriever)	TCIA Restricted
1p19q Status and Histologic Type (XLS, 53 kB)	Download	CC BY 3.0

Click the Versions tab for more info about data releases.

Detailed Description

Detailed Description

Collection Statistics	Radiology image statistics
Modalities	MR, SEG
Number of Participants	159

Number of Studies	160
Number of Series	478
Number of Images	17,519
Image Size (GB)	2.7

Supporting Documentation and Metadata

For the 1p/19q status "n/n" means neither 1p nor 19q were deleted. "d/d" means 1p and 19q are co-deleted.

Versions

Version 2 (Current): Updated 2020/06/26

Data Type	Download all or Query/Filter
Images and Segmentations (2.7GB)	Download Search (Download requires NBIA Data Retriever)
Segmentations only (DICOM)	Download

	(Download requires NBIA Data Retriever)
1p19q Status and Histologic Type	Download

Previously the segmentations of the tumors were provided in NIfTI format and only included three axial slices (the one with the largest tumor diameter and ones below and above). In version 2 segmentations of the entire T2 signal abnormality are provided in DICOM-SEG format.

Version 1: Updated 2017/09/30

Data Type	Download all or Query/Filter
Images (2.7GB)	Download (Download requires NBIA Data Retriever)
Segmentations (NIfTI, 2.9GB)	Download (Redirects to large-file storage "Box")
1p19q Status and Histologic Type	Download
