

The Cancer Genome Atlas Head-Neck Squamous Cell Carcinoma Collection (TCGA-HNSC)

Summary

Redirection Notice

This page will redirect to <https://www.cancerimagingarchive.net/collection/tcga-hnsc/> in about 5 seconds.

The Cancer Genome Atlas Head-Neck Squamous Cell Carcinoma (TCGA-HNSC) data collection is part of a larger effort to build a research community focused on connecting cancer phenotypes to genotypes by providing clinical images matched to subjects from [The Cancer Genome Atlas \(TCGA\)](#). Clinical, genetic, and pathological data resides in the [Genomic Data Commons \(GDC\) Data Portal](#) while the radiological data is stored on The Cancer Imaging Archive (TCIA).

Matched TCGA patient identifiers allow researchers to explore the TCGA/TCIA databases for correlations between tissue genotype, radiological phenotype and patient outcomes. Tissues for TCGA were collected from many sites all over the world in order to reach their accrual targets, usually around 500 specimens per cancer type. For this reason the image data sets are also extremely heterogeneous in terms of scanner modalities, manufacturers and acquisition protocols. In most cases the images were acquired as part of routine care and not as part of a controlled research study or clinical trial.

CIP TCGA Radiology Initiative

Imaging Source Site (ISS) Groups are being populated and governed by participants from institutions that have provided imaging data to the archive for a given cancer type. Modeled after TCGA analysis groups, ISS groups are given the opportunity to publish a marker paper for a given cancer type per the guidelines in the table above. This opportunity will generate increased participation in building these multi-institutional data sets as they become an open community resource. Learn more about the [TCGA Head-Neck Phenotype Research Group](#).

Acknowledgements

We would like to acknowledge the individuals and institutions that have provided data for this collection:

- Ontario Cancer Institute/University Health Network, Toronto, Ontario - Special thanks to **Fei-Fei Liu (MD)**, **Kenneth Yip (Ph.D.)**, **Katrina Rey-McIntyre (BSc.)**, **Scott Bratman (MD, Ph.D.)** and **John Waldron (MD, MSc.)**.
- University of Pittsburgh/UPMC, Pittsburgh, PA - Special thanks to **Margrita L Zuley, MD** and **Rose Jarosz**.
- University of North Carolina, Chapel Hill, NC - Special thanks to **J. Keith Smith, MD, Ph.D.** and **Shanah Kirk** from the Department of Radiology.
- MD Anderson Cancer Center, Houston TX - Special thanks to **Rivka Colen, MD**, **Kimberly Garcia**, and **Bowman Williams**.
- Vanderbilt University Medical Center, Nashville TN - Special thanks to **Dominiq Delbeke, MD, Ph.D.** and **Michelle Pham**.

- Johns Hopkins University - Special thanks to **Paul Nagy, PhD, FSIIM** and **Gorkem Sevinc**
- University of Miami, Miller School of Medicine- Special thanks to **Jose M. Net, MD**
- Barretos Cancer Hospital, Barretos, São Paulo, Brazil – Special Thanks to **Fabiano Rubião Lucchesi, MD** and **Natália Del Angelo Aredes**.

Data Access

Data Access

Some data in this collection contains images that could potentially be used to reconstruct a human face. To safeguard the privacy of participants, users must sign and submit a [TCIA Restricted License Agreement](#) to help@cancerimagingarchive.net before accessing the data.

Data Type	Download all or Query /Filter	License
Images and Radiation Therapy Structures (DICOM, 130GB)	Download Search (Download requires the N BIA Data Retriever)	TCIA Restricted

Click the Versions tab for more info about data releases.

Additional Resources for this Dataset

The NCI Cancer Research Data Commons (CRDC) provides access to additional data and a cloud-based data science infrastructure that connects data sets with analytics tools to allow users to share, integrate, analyze, and visualize cancer research data.

- [Imaging Data Commons \(IDC\)](#) (Imaging Data)
- [Genomic Data Commons \(GDC\)](#) (Genomic, Digitized Histopathology & Clinical Data)

Third Party Analyses of this Dataset

TCIA encourages the community to [publish your analyses of our datasets](#).

Below is a list of such third party analyses published using this Collection:

- [Crowds Cure Cancer: Data collected at the RSNA 2018 annual meeting \(Crowds-Cure-2018\)](#)

Detailed Description

Detailed Description

Image Statistics	
Modalities	CT, MR, PT, RTDOSE, RTPLAN, RTSTRUCT

Number of Participants	227
Number of Studies	479
Number of Series	2,561
Number of Images	270,376
Images Size (GB)	129.6

Total Cases by Site

GDC Data Portal - Clinical and Genomic Data

The [Genomic Data Commons \(GDC\) Data Portal](#) has extensive clinical and genomic data, which can be matched to the patient identifiers on the images here in TCIA. Below is a snapshot of clinical data extracted on 1/5/2016:

- [TCGA-HNSC Clinical Data.zip](#)

Case report forms for the clinical data collected by TCGA can be found on the Biospecimen Core Resource Clinical Data Forms linked below:

- [Head and Neck Case Quality Control Form](#)
- [Head and Neck Enrollment Form](#)
- [Head and Neck Follow-Up Form](#)

The contents of the clinical_patient file as of June 29, 2014, for cases whose imaging are archived on TCIA are [here](#).

A Note about TCIA and TCGA Subject Identifiers and Dates

Subject Identifiers: a subject with radiology images stored in TCIA is identified with a Patient ID that is identical to the Patient ID of the same subject with demographic, clinical, pathological, and/or genomic data stored in TCGA. For each TCGA case, the baseline TCGA imaging studies found on TCIA are pre-surgical.

Dates: TCIA and TCGA handle dates differently, and there are no immediate plans to reconcile:

- **TCIA Dates:** dates (be they birth dates, imaging study dates, etc.) in the Digital Imaging and Communications in Medicine (DICOM) headers of TCIA radiology images have been offset by a random number of days. The offset is a number of days between 3 and 10 years prior to the real date that is consistent for each TCIA image-submitting site and collection, but that varies among sites and among collections from the same site. Thus, the number of days between a subject's longitudinal imaging studies are accurately preserved when more than one study has been archived while still meeting HIPAA requirements.
- **TCGA Dates:** the patient demographic and clinical event dates are all the number of days from the index date, which is the actual date of pathologic diagnosis. So all the dates in the data are relative negative or positive integers, except for the "days_to_pathologic_diagnosis" value, which is 0 – the index date. The years of birth and diagnosis are maintained in the distributed clinical data file. The NCI retains a copy of the data with complete dates, but those data are not made available. With regard to other TCGA dates, if a date comes from a HIPAA "covered entity's" medical record, it is turned into the relative day count from the index date. Dates like the date TCGA received the specimen or when the TCGA case report form was filled out are not such covered dates, and they will appear as real dates (month, day, and year).
