

VASARI Reading assignments

Reader analysis will be measured in batches of ~15 cases. Progress will be monitored by the CIP team and updated in the table below on a daily basis with the following indicators:

Completed - Reader has finished reading the case and submitted their AIM characterizations to the AIM data service

In Progress - Reader has been instructed to review this case, but has not yet completed it

Unassigned - Reader has not yet been asked to review this case

Readers must follow instructions for downloading the required data and installing the necessary software: [VASARI Reader Instructions](#).

Round 3 Reader progress - Updated 12/18/12

(Note: the table can be sorted by clicking on column headers)

Batch 7 and 8 cases are not part of the Cancer Cell article but are in NBIA.

Notes:

- Dima disqualified TCGA-06-0130 and TCGA-06-178 as post-op
- Carlos email 5/20 indicates TCGA-06-0157 appears to be post-op but both Dima and Max had scored this.
- Scott email 5/24 indicates TCGA-08-0509 and TCGA-08-0511 do not have precontrast images. Adam suggested he would be in favor of throwing out such cases. Max has already read these two.
- Carlos email 5/25 indicates Cases 08-0244, 08-0246, 08-348, 08-0510 and 08-0516 are missing the T1 precontrast sequence.
- Justin found on 5/25 that Prashant scored TCGA-08-0529 twice. Sent email to get confirmation on which should be kept.
- Justin found on 5/25 that Manal scored TCGA-06-0166 twice. Sent email to get confirmation on which should be kept.
- Carlos email 5/25 indicates Manal has not read cases 06-0137 and 06-0139, they are also post-op.

- Dima email 5/25 indicates 06-0139 has two studies, the first after biopsy of left temporal lobe lesion (with some blood), and the second one after partial resection.
- Carlos email 5/28 indicates Max has not read batch #7 cases 06-0121, 06-0125, 06-0141 and 06-0144 because they are post-op
- Carlos email 5/28 indicates Max has not read batch #8 case 06-0156 because it is post-op nor case 08-0381 because there is no T1 precontrast
- Carlos email 5/28 indicates Max did not read cases 08-0246 and 08-348 because they are missing the T1 precontrast
- Dima email 5/27 indicates 06-0121: patient's scan done with fiducials, indicating plan for surgery, but there is already a left frontal craniotomy and suggestion of prior partial resection.
- Dima email 5/27 indicates 06-0125: patient has two scans, one labeled 12 July 1885 and the other one labeled 01 October 1887. The former is definitely immediate post-op. the latter shows enhancing tumor but there is evidence of previous left frontal and temporal craniotomy with suggestion of previous surgical changes in the left temporal lobe.
- Dima email 5/27 indicates 06-0134: left frontal craniotomy, surgical cavity and I believe there are gliadel wafers within the cavity. 06-0141: subtotal resection, recent surgery. 06-0144: right frontal craniotomy/ surgical cavity.
