

# The Clinical Proteomic Tumor Analysis Consortium Glioblastoma Multiforme Collection (CPTAC-GBM)

# Summary

## Redirection Notice

This page will redirect to <https://www.cancerimagingarchive.net/collection/cptac-gbm/> in about 5 seconds.

This collection contains subjects from the National Cancer Institute's [Clinical Proteomic Tumor Analysis Consortium](#) Glioblastoma Multiforme (CPTAC-GBM) cohort. The GBM confirmatory cohort was supplemented with retrospective samples from CHOP (Children's hospital of Philadelphia)-Upenn. CPTAC is a national effort

to accelerate the understanding of the molecular basis of cancer through the application of large-scale proteome and genome analysis, or proteogenomics. Radiology and pathology images from CPTAC patients are being collected and made publicly available by The Cancer Imaging Archive to enable researchers to investigate cancer phenotypes which may correlate to corresponding proteomic, genomic and clinical data.

Imaging from each cancer type will be contained in its own TCIA Collection, with the collection name "*CPTAC-cancertype pe*". Radiology imaging is collected from standard of care imaging performed on patients immediately before the pathological diagnosis, and from follow-up scans where available. For this reason the radiology image data sets are heterogeneous in terms of scanner modalities, manufacturers and acquisition protocols. Pathology imaging is collected as part of the CPTAC qualification workflow.

All CPTAC cohorts are released as either a single combined cohort, or split into *Discovery* and *Confirmatory* where applicable. There are two main types of proteomic studies: discovery proteomics and targeted proteomics. The term "discovery proteomics" is in reference to "untargeted" identification and quantification of a maximal number of proteins in a biological or clinical sample. The term "targeted proteomics" refers to quantitative measurements on a defined subset of total proteins in a biological or clinical sample, often following the completion of discovery proteomics studies to confirm interesting targets selected. Commonly used proteomic technologies and platforms are different types of mass spectrometry and protein microarrays depending on the needs, throughput and sample input requirement of an analysis, with further development on nanotechnologies and automation in the pipeline in order to improve the detection of low abundance proteins, increase throughput, and selectively reach a target protein *in vivo*. Once the protein targets of interest are identified, high-throughput targeted assays are developed for confirmatory studies: tests to affirm that the initial tests were accurate. A summary of CPTAC imaging efforts can be found on the [CPTAC Imaging Proteomics](#) page.

## CPTAC Imaging Special Interest Group

You can join the [CPTAC Imaging Special Interest Group](#) to be notified of webinars & data releases, collaborate on common data wrangling tasks and seek out partners to explore research hypotheses! Artifacts from previous webinars such as slide decks and video recordings can be found on the [CPTAC SIG Webinars](#) page.

On May 13, 2020 Liang-Bo Wang and Runyu Hong presented the consortium's proteogenomic analyses of the [CPTAC Glioblastoma \(GBM\)](#) cohort. This deep dive into the GBM genomic and proteomic datasets will help researchers better understand how these can be correlated with features derived from the imaging data. ([Download the slides](#))

## Acknowledgements

We would like to acknowledge the individuals and institutions that have provided data for this collection:

- Beaumont Health System, Royal Oak, MI - Special thanks to **George D. Wilson, PhD** from the Department of Radiation Oncology Research, **Barbara Pruetz** of the Biobank, **Debra Kapczynski, MHSA, CIIP, RT(R)(CT)** and **Rachel Deyer** from the Department of Diagnostic Radiology.
- International Institute for Molecular Oncology, Pozna, Poland - Special thanks to **Maciej Wiznerowicz MD, PhD** and **Jan Lubiski MD PhD**, **Tomasz Czernicki MD, PhD** and **Andrzej Marchel MD, PhD** from Central Clinical Hospital in Warsaw, **Pawel Jarmuek MD, PhD**, **Jakub Stawicki MD** and **Piotr Makarewicz MD** from Karol Marcinkowski Regional Clinical Hospital in Zielona Góra; and **Wojciech Szopa MD, PhD** and **Wojciech Kaspera MD, PhD** from Regional Clinical Hospital Sosnowiec in Poland
- St. Joseph's Hospital and Medical Center, Phoenix, AZ - Special thanks to **Jennifer Eschbacher, MD** from the Department of Neuropathology, **Catherine Seiler, PhD**, **Rosy Singh** and **Beth Hermes** from the Biobank Core Facility, and **Victor Sisneros, RT(R)(CT), CPSA**.
- Cureline, Inc. team and clinical network, Brisbane, CA - Special thanks to **Olga Potapova, Ph.D.**, **Vladislav Golubkov, Ph.D.**, **Victoria Fulidou, M.D.**, **Alexander Sviridov, Dmitry Belyaev, M.D.**, **Oxana Paklina, M.D., Dr.Sc.**, **Galiya Setdikova, M.D., Ph.D.**, **Denis Golbin, M.D., Ph.D.**

## Data Access

### Data Access

Some data in this collection contains images that could potentially be used to reconstruct a human face. To safeguard the privacy of participants, users must sign and submit a [TCIA Restricted License Agreement](#) to [help@cancerimagingarchive.net](mailto:help@cancerimagingarchive.net) before accessing the data.

Data Type	Download all or Query/Filter	License
Images (66 subjects, 148 studies, DICOM, 39.4 GB)	<a href="#">Download</a> <a href="#">Search</a> (Download requires the <a href="#">NBIA Data Retriever</a> )	TCIA Restricted
Tissue Slide Images (178 subjects, 462 files, SVS, 86 GB)	<a href="#">Download</a> <a href="#">Search</a> (Download and apply the <a href="#">IBM-Aspera-Connect plugin</a> to your browser to retrieve this faspx package)	CC BY 3.0

Click the Versions tab for more info about data releases.

## Additional Resources for this Dataset

The NCI Cancer Research Data Commons (CRDC) provides access to additional data and a cloud-based data science infrastructure that connects data sets with analytics tools to allow users to share, integrate, analyze, and visualize cancer research data.

- [Imaging Data Commons \(IDC\)](#) (Imaging Data)

- [Proteomic Data Commons \(PDC\)](#) (Proteomic & Clinical Data)
- [Genomic Data Commons \(GDC\)](#) (Genomic & Clinical Data)

## Third Party Analyses of this Dataset

TCIA encourages the community to [publish your analyses of our datasets](#). Below is a list of such third party analyses published using this Collection:

- [MRQy quality measures for TCIA MRI datasets \(MRQy-Quality-Measures\)](#)
- [Crowds Cure Cancer: Data collected at the RSNA 2018 annual meeting \(Crowds-Cure-2018\)](#)
- [RSNA-ASNR-MICCAI-BraTS-2021](#)

### Detailed Description

#### Detailed Description

	Radiology Image Statistics	Pathology Image Statistics
Modalities	CT, MR	Pathology
Number of Participants	66	178
Number of Studies	148	N/A
Number of Series	1,752	N/A
Number of Images	156,259	462
Images Size (GB)	39.4	86

## Accessing CPTAC publication cohorts

All CPTAC cohorts are released as either a single combined cohort, or split into *Discovery* and *Confirmatory* where applicable. In the case of CPTAC-GBM there was a "Discovery Cohort" release. Images associated with these cases can be downloaded using the following links:

- [CPTAC-GBM Radiology Discovery Cohort](#)
- [CPTAC-GBM Pathology Discovery Cohort](#)

## Accessing the Proteomic & Genomic Clinical Data

To access/download the clinical data on the **Proteomic Data Commons (PDC)** and **Genomic Data Commons (GDC)**, once you have identified the data of your interest, move to the 'Clinical' tab on the browse page. Select the checkbox to select a specific row, all rows on the page or all pages and click the export clinical manifest button in CSV or TSV format on the GDC, or TSV or JSON format on the PDC.

## A Note about TCIA and CPTAC Subject Identifiers and Dates

### Subject Identifiers:

A subject with radiology and pathology images stored in TCIA is identified with a de-identified project Patient ID that is identical to the Patient ID of the same subject with clinical, proteomic, and/or genomic data stored in other CPTAC databases and web sites.

### Dates:

The radiology imaging data is in DICOM format. To provide temporal context information aligned with events in the clinical data set for each patient, TCIA has inserted information in DICOM tag (0012,0050) *Clinical Trial Time Point ID*. This DICOM tag contains the number of days from the *date the patient was initially diagnosed pathologically with the disease* to the date of the scan. E.g. a scan acquired 3 days before the diagnosis would contain the value -3. A follow up scan acquired 90 days after diagnosis would contain the value 90.

The DICOM date tags (be they birth dates, imaging study dates, etc.) are modified per TCIA's standard process which offsets them by a random number of days. The offset is a number of days between 3 and 10 years prior to the real date that is consistent for each TCIA image-submitting site and collection, but that varies among sites and among collections from the same site. Thus, the number of days between a subject's longitudinal imaging studies are accurately preserved when more than one study has been archived while still meeting HIPAA requirements.

### Citations & Data Usage Policy

### Citations & Data Usage Policy

Users must abide by the [TCIA Data Usage Policy and Restrictions](#). Attribution should include references to the following citations:

## Other Publications Using This Data

TCIA maintains [a list of publications](#) which leverage TCIA data. If you have a manuscript you'd like to add please contact [TCIA's Helpdesk](#).

### Versions

#### Version 15 (Current) : Updated 2023/05/10

Data Type	Download all or Query/Filter
Images (DICOM, 39.4 GB)	<a href="#">Download</a> (Requires <a href="#">NBIA Data Retriever</a> .)
Tissue Slide Images (SVS, 86 GB)	<a href="#">Download</a> <a href="#">Search</a>
Proteomics (web)	<a href="#">Search</a>

11 pathology patients removed from study.

#### Version 14 : Updated 2023/02/24

Data Type	Download all or Query/Filter
Images (DICOM, 39.4 GB)	<a href="#">Download</a> (Requires <a href="#">NBIA Data Retriever</a> .)
Tissue Slide Images (SVS, 112 GB)	<a href="#">Download</a> <a href="#">Search</a>
Proteomics (web)	<a href="#">Search</a>

Radiology modality data cleanup to remove extraneous scans.

#### Version 13 : Updated 2020/09/03

Data Type	Download all or Query/Filter
Images (DICOM, 39.8 GB)	<a href="#">Download</a> (Requires <a href="#">NBIA Data Retriever</a> .)
Tissue Slide Images (SVS, 112 GB)	<a href="#">Download</a> <a href="#">Search</a>
Proteomics (web)	<a href="#">Search</a>

Changed to new Aspera download link for histopathology slides.

## Version 12: Updated 2020/02/31

Data Type	Download all or Query/Filter
Images (DICOM, 39.8 GB)	<a href="#">Download</a> <a href="#">Search</a> (Requires <a href="#">NBIA Data Retriever</a> .)
Tissue Slide Images (SVS, 112 GB)	<a href="#">Download</a> <a href="#">Search</a>
Proteomics (web)	<a href="#">Search</a>

Corrected 1 radiology subject cancer type, and added 3 radiology subjects.

## Version 11: Updated 2020/02/14

Data Type	Download all or Query/Filter
Images (DICOM, 39.4 GB)	<a href="#">Download</a> (Requires <a href="#">NBIA Data Retriever</a> .)
Tissue Slide Images (SVS, 112 GB)	<a href="#">Download</a> <a href="#">Search</a>
Proteomics (web)	<a href="#">Search</a>

Added 8 new pathology subjects & 37 new pathology slides

## Version 10: Updated 2019/12/16

Data Type	Download all or Query/Filter
Images (DICOM, 39.4 GB)	<a href="#">Download</a> (Requires <a href="#">NBIA Data Retriever</a> .)
Tissue Slide Images (SVS, 87 GB)	
Proteomics (web)	<a href="#">Search</a>

Added 5 new radiology and 2 pathology subjects

## Version 9 : Updated 2019/10/30

Data Type	Download all or Query/Filter
Images (DICOM, 38.7 GB)	<a href="#">Download</a> (Requires <a href="#">NBIA Data Retriever</a> .)

Tissue Slide Images (SVS, 87 GB)	
Proteomics (web)	<a href="#">Search</a>

Added new subjects

### Version 8: Updated 2019/09/30

Data Type	Download all or Query/Filter
Images (DICOM, 38.7 GB)	<a href="#">Download</a> (Requires <a href="#">NBIA Data Retriever</a> .)
Tissue Slide Images (SVS, 79 GB)	
Proteomics (web)	<a href="#">Search</a>

Added new subjects

### Version 7 : Updated 2019/06/30

Data Type	Download all or Query/Filter
Images (DICOM, 36.1 GB)	<a href="#">Download</a> (Requires <a href="#">NBIA Data Retriever</a> .)
Tissue Slide Images (SVS, 52.3 GB)	
Proteomics (web)	<a href="#">Search</a>

Added new subjects

### Version 6 : Updated 2019/03/31

Data Type	Download all or Query/Filter
Images (DICOM, 21.2 GB)	<a href="#">Download</a> (Requires <a href="#">NBIA Data Retriever</a> .)
Tissue Slide Images (web)	<a href="#">Search</a>
Proteomics (web)	<a href="#">Search</a>

Added new subjects

## Version 5: Updated 2018/12/31

Data Type	Download all or Query/Filter
Images (DICOM, 20.8 GB)	<a href="#">Download</a> (Requires NBIA Data Retriever.)
Tissue Slide Images (web)	<a href="#">Search</a>
Proteomics (web)	<a href="#">Search</a>

Added new subjects.

## Version 4: Updated 2018/10/24

Data Type	Download all or Query/Filter
Images (DICOM, 19.2 GB)	<a href="#">Download</a> (Requires NBIA Data Retriever.)
Tissue Slide Images (web)	<a href="#">Search</a>
Proteomics (web)	<a href="#">Search</a>

Added new subjects.

## Version 3: Updated 2018/06/30

Data Type	Download all or Query/Filter
Images (DICOM, 12.9 GB)	<a href="#">Download</a> (Requires NBIA Data Retriever.)
Tissue Slide Images (web)	<a href="#">Search</a>
Proteomics (web)	<a href="#">Search</a>

Added new subjects.

## Version 2: Updated 2018/04/26

Data Type	Download all or Query/Filter
Images (DICOM, 12.4 GB)	<a href="#">Download</a> (Requires NBIA Data Retriever)
Tissue Slide Images (web)	<a href="#">Search</a>

Proteomics (web)	<a href="#">Search</a>
------------------	------------------------

Added new subjects.

## Version 1: Updated 2018/01/10

Data Type	Download all or Query/Filter
Images (DICOM, 10.42 GB)	<a href="#">Download</a> (Requires <a href="#">NBIA Data Retriever</a> )
Tissue Slide Images (web)	<a href="#">Search</a>
Proteomics (web)	<a href="#">Search</a>
